

FLP® ENTERPRISE MANAGEMENT SYSTEM ALL-IN-ONE BACKUP SOLUTION SIMPLE AND EASY-TO-MANAGE

FLP® Enterprise Management System is an all-in-one solution which helps you manage your business and offers reliable data backup. FLP® differentiates itself in the marketplace by providing a comprehensive backup solution.

FLP® Uses the Same Software for Production and Backup Server

FLP® runs on IBM Lotus Domino/Notes. Its market leading 'replicate' functionality allows data in the production server to be replicated, e.g. every 15 minutes, to the backup server. You don't need to adopt third party backup software to run the risk of incompatibility of software. FLP® avoids the painstaking problem of copying a file which is in open status.

Automated Backup on External Media

FLP® backup solution further allows you to automate the backup on media every night. For example, you simply insert the backup media, e.g. 73G Iomega Disk, to the disc drive and rotate it every day. You can schedule to backup data onto the disc every night at 3 a.m.

FLP® is IBM ServerProven®

The IBM ServerProven designation represents solutions that have been confirmed by IBM to be installed and running on an IBM System in an end-user, production environment and that have completed an enablement activity.

Why FLP® Backup Solution

- FLP® backup solution leverages IBM servers to help customers enjoy increased confidence.
- FLP® backup solution helps you reduce the total solution costs.
- FLP® backup solution increases the reliability and stability of your business solutions.
- FLP® backup solution eliminates the worry of incompatibility of backup software.
