- Expand exponentially with sufficient capacity to cater for multiple currencies, multiple users and multiple locations.
- Make fragmented or diversified operations worthwhile using a standardized, centralized and uniform management system.
- Increase revenue by capturing the sales opportunities.
- Secure financial position with always up-to-date information of accounts receivable and cash flow.
- Communicate the strategy and monitor the scoreboard.
- Obtain useful business information anywhere and anytime.
- Monitor the actual, adjust the plan and compare to the budget.
- Make management accountable to department performance.
- Set goal and strategy expediently.
- Benchmark the performance standard.
- Identify key success factors of your enterprise.
- Allocate company resources timely and flexibly.

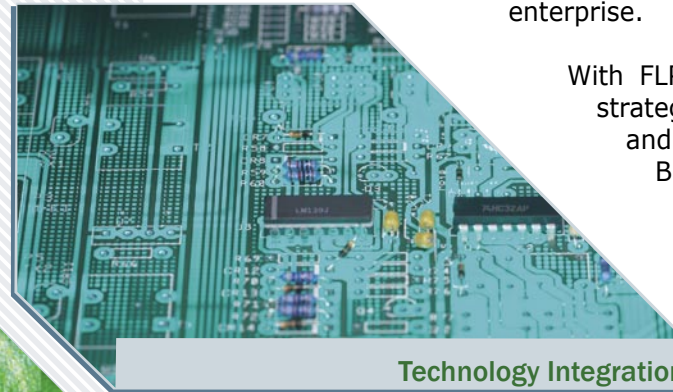

Comfortably Control Over Your Enterprise

Performance Monitoring

Business Intelligence

Technology Integration

Market Capture

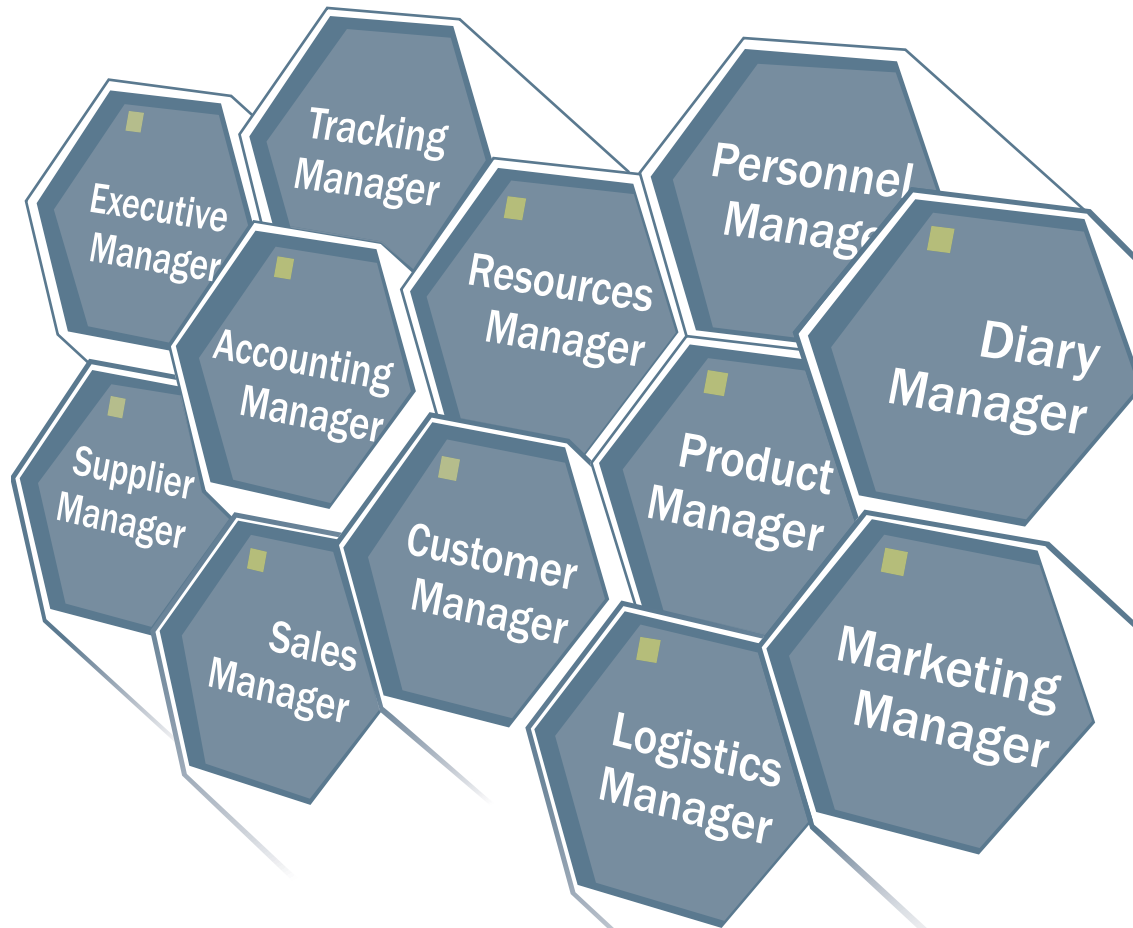

FLP provides a concrete and realistic approach to support you to manage your enterprise. These concepts go beyond the textbook theory, regular reporting or tedious workflow. FLP EMS supports dynamic and real-time business processes. Conventional software solutions emphasize too much on technology, data interchange and system communication.

FLP EMS enables you to frame your own business model according to your wish with the business processes specific to your enterprise.

With FLP EMS, you can access real-time data on all strategically important aspects of your enterprise, and can simulate and plan future development. FLP Business Intelligence is a treasure box containing precious summaries, exception reports and financial extracts. FLP Wish-and-Get lets you pull out any information anytime and anywhere.

FLP EMS provides a comprehensive tool to manage total operations, measure performance and analyze results in a complex enterprise environment. You are no longer in a passive position but proactively determine business strategies and flexibly acquire business information.

FLP Enterprise Management System - Components

FLP Enterprise Management System is the first computer software adopting the as-a-whole concept with comprehensive functionality and advanced break-through features to enable enterprises to streamline business processes and consolidate every piece of employee effort so that the enterprise is able to react flexibly to the ever-changing market.

An enterprise workplace may be interpreted as a group of Functional Managers each of whom is accountable to a specific business process and at the same time interacts instantly with other Functional Managers.

Twelve FLP Functional Managers are ready to serve you.

FLP Functional Managers

FLP Executive Manager

FLP Executive Manager steers the whole enterprise in terms of maintaining action logs and assigning security rights.

FLP Customer Manager

FLP Customer Manager handles customer profiles, sales leads, meetings, sales calls, quotations and projects. The chief officers are able to have an overview of enterprise sales performance and react immediately to the market. FLP Planner is a powerful real time personal assistant acting as a reminder, diary, sales lead informant, sales call report, quotation summary, phone book, meeting, agenda and documentation according to which category is being viewed.

FLP Accounting Manager

FLP Accounting Manager provides a revolutionary and professional approach to chart of accounts and double entries. Multi-location, multi-center, multi-user, multi-language and multi-currency are the standard rather than a dream. Issuing cheques and making double entries are done once and for all. The advanced feature of FLP Accounting Manager API lets third party systems integrate with FLP Accounting Manager.

FLP Functional Managers

FLP Logistics Manager

FLP Logistics Manager is most ideal for corporations requiring a prompt track of goods-in and goods-out of serial numbers, for example container numbers or computer serial numbers. FLP Logistics Manager presents useful up-to-date summaries on-line. You simply click on any line of summary and FLP Logistics Manager will instantly lead you to walk through the history pertaining to a particular serial number, for example, supplier, cost, delivery, customer, warranty and service.

Other Functional Managers

Other FLP Functional Managers are equally significant, namely, Tracking Manager, Resources Manager, Diary Manager, Personnel Manager, Product Manager, Supplier Manager, Marketing Manager and Sales Manager. Only by using FLP can you feel how relaxing and controlling you are in management, using the next-generation technology.

>> multi-language support

FLP Comprehensive Functionality

Technology Adaptation

FLP is focused on realities of complex operating environment of your enterprise and adapts the computer software into a true mix of human and tools with intuitive user interface. FLP refines every word and message to interact with you. The database design is neat, tidy and record-based and a system administrator finds it easy to maintain. You own your IT department, slim, and efficient.

Realistic and Cost Effective

FLP considers you a business partner rather than a customer and gives you right size and cost effective solutions. FLP adopts clean and open technology to let you have a classy tool to start with and expand easily in terms of turnover, market share and locations.

As-a-Whole Approach

FLP does not follow the old-fashioned module approach. Every operating process and document is interpreted as an integral part of the enterprise, thus eliminating conventional posting or excessive updating.

Business Intelligence

More than supplying information, FLP Business Intelligence is a collection of business informants in genuine approach of Wish-and-Get. You rarely need to export or massage any data to serve a particular purpose. Just click and get what you want.

Type Once; Use Many; Many can Use

The true context of efficiency is doing right things right and once. All the subsequent analysis, information share and reporting naturally come from inputting once.

Timeliness and Anywhere

Following the As-a-Whole approach, every piece of information is capable of linking events top-down, bottom-up and even wish-and-get.

FLP Advanced Features

System Security

FLP uses public key infrastructure and information can be sent securely over the Internet. FLP Document Control Handler allows you to define the access right of a document. Button Control Handler, Menu Control Handler and Tracking Manager characterize FLP security.

Multi-Currency

FLP lets you send quotation in any currency you prefer. You can also limit what currencies should be dealt with in your organization. FLP Accounting Manager follows the multi-currency accounting standard.

Multi-Language

FLP internally supports multi-language and you don't need to install any add-on language packs. The screen interface will use your preferred language to communicate with you.

Eliminating Codification

You don't need to remember the product code, account code or customer code. Just type in the commonly referred name and FLP handles the background identification code.

Collaboration Solution

FLP is a collaboration of finance, workflow and communication which is running under one platform without the necessity of requiring third party email facilities or data interchange.

PDF and Email

FLP offers PDF solutions. Quotation and overdue reminder may be produced in PDF with the option of attaching the PDF to an email.

Report Writer

FLP respects the need of providing professional printouts and you are able to set your own letterheads and document formats.

Easy Backup Plan

The 'replicate' functionality is an advanced back-up feature allowing you to assign a server or a personal computer to backup FLP data automatically and on scheduled intervals. Redundant time is minimal when switching to backup server. FLP also allows easy backup on DVD.

Site Replication

To open a new outlet, branch or representative office, you only need a broadband connection. New staff works immediately and company policies and data are communicated simultaneously.

FLP Accounting Manager API

FLP Accounting Manager API provides a set of definitions and interface using which third party developers are able to integrate FLP Accounting Manager with their business applications.

Benefits of FLP

Improved Cash Flow. Receivables are monitored instantly and constantly.

Enhanced Productivity. The intuitive user interface and functionality let people work efficiently.

Cost Control. Improved efficiency and prompt decision bring about cost savings.

Prompt Business Decisions. Managers can effectively get every aspect of strategic information of the organization.

Global Extension. Business transactions can be denominated in multiple currencies and you can get access to business information anywhere.

Increased Revenue. Immediate identification of sales lead and site replication allows larger market share.

Improved Logistics Management. Goods-in and Goods-out are nicely tracked in a centralized system.

Quality Customer Services. Deluxe class of customer services will be provided as most enquiries can be replied off-site.

Control. FLP allows you to have overall control of your enterprise anytime, anywhere and at once.

FLP Team

More than selling products, FLP team provides solutions. FLP team places Quality, Value and Simplicity as the key components of business success.
