

Successful Business Selects **FLP**®

www.flpe.com

PRACTICAL

There are a lot of successful small and medium businesses (SBM) and their way of running business is very different from the enterprise. SBMs don't have a clear-cut line of job responsibility. Some managers are accountable to two or even three responsibilities. Likewise, some staff are carrying two job functions. We are trying to reshape the corporate management systems of the SBMs. FLP® solutions withdraw all the bitter IT terms from the SBMs, retaining as few as possible those layman understandable terms such as CRM, ERP, Financial and Logistics.

BUSINESS WISDOM

We believe the midst and the wisdom of automating SBMs towards a paperless environment is how to configure a simple and fast business solution, rather than hard sell the concept of work flows, systems or line of reporting. SBMs don't have such patience to listen. What the dreams come true for our FLP® Solutions is we have cultivated a working model will all the tools on the working field where the staff of SBMs, from clerks to managers and to the owners, can just click into the FLP® and do what they want and view what they want. We believe we don't need to over-complicate the corporate management systems.

HUMAN WAY OF OPERATIONS

Should we massage the people to adapt to the machine-way of handling works or should the applications be designed as close to the human way of operations? FLP[®] solutions move along the highway of the latter one which is our principle in Oasis Systems from day one. (Oasis Systems was our company name when first established in 1989.) Strictly speaking, the concept of FLP[®] solutions never follow the approach, now commonly referred to, integrated applications. The spirit of FLP[®] package when first written is already a full featured easy-to-use product for SBMs. FLP[®] package does not have a so-called CRM module, Accounting modules, Ordering modules, Human Resources, etc. FLP[®] package comes out just like that - an application fitting into SBMs business operations. Every function of FLP[®] is so handy for a user to use.

NATURAL AND ALL-IN-ONE

Imagine the situation that the shipping supervisor will not first think of "selecting the stock module and then selecting the container input form." Human beings are not working in this way! Human way works in such a way as marking the container numbers on the shipment inward form and check against the approved purchase order. The above work process is a day-to-day exercise of the shipping supervisor. This already involves Stock module, Ordering module, Accounting module. The shipping supervisor will never wish to know "three modules"! Our FLP's approach come so natural and work so harmony as a tool to the supervisor. What the shipping supervisor needs to do is to open the form, select the purchase order, data entry the shipment date. That is it. The accounting supervisor match the physical supplier invoice against the system and approve it, pressing a button to generate the debit(s) and credits(s). Every single step ties in the human way of day-to-day works. It is also the reason why we say FLP[®] is not an integrated application as we won't say human beings are "integrated organs". Human being is a unit and FLP[®] also.

FITS YOUR BUSINESS

No one package can fit exactly every company, and this is why we are here to provide FLP[®] Solutions. Based on the framework of FLP[®] packaged product, we custom the FLP package to best meet your company within the shortest possible time.
